

# Full Syllabus

## Course Title

Final Project Seminar

## Lecturer

Dr. Moran Bodas

## Semester

Spring semester

## Course requirements

Prerequisites: Scientific Writing, Introduction to Epidemiology & Research Methods, and Statistics. Students are required to submit their proposals by March 31st, 2023. Students are required to submit their final paper by October 14th, 2023.

## Final grade components

100% Final Project

## Course Schedule

Class taught as Colloquium and personal meetings

## Required course reading

Since each student will research a different topic, literature changes between students.

## Optional course reading

Since each student will research a different topic, literature changes between students.

## Comments

Writing the final paper for the program is a challenging process. It can be tricky to develop a scientific idea and incorporate it into an actual research question or course. This course is intended to allow students to engage in discourse among themselves under the lecturer's supervision. This discussion will allow a smoother process of research development and adaptation to the requirements of the final project.

This course will serve as a colloquium (a discourse stage) to facilitate the process of the final paper development.
