Cech, T. V. (2003) Principles of Water Resources: History, Development, Management and Policy. John Wiley & sons, Inc.

Tal, A. and Abed-Rabbo, A. (2008) Water Wisdom: Preparing the Groundwork for Cooperative and Sustainable Water Management in the Middle East.

Optional course reading

Additional reading material will be made available during the semester for each topic.

Comments

General course objectives: This course will introduce the major issues hindering or allowing for efficient water management in the Middle East. As water scarcity is a reality in the region, it is critical to explore the ways and means for sustainable management of this resource in the face of growing demand and dwindling supply and the associated regional plans for water allocation among the countries of the region. The course will concentrate on the Jordan River and Dead Sea Basin and associated groundwater resources and how these waters are managed and shared. The course will focus on the water resources of Israel, the Palestinian Authority and Jordan. The goal of the course is to provide students with an overview of the challenges facing policy makers and water experts in effectively managing these shared resources and negotiating over their equitable allocation .

Course format/delivery: Lecture and discussion
